

How to Prepare for a Window Installation

Preparation of Work Area

Please clear the area around the windows, both inside and outside, of furniture, decorations, plants, and any other items. This not only gives our team room to work but also helps prevent accidental damage to your belongings. Any damage to items left in the work area will not be Tidal Remodeling's responsibility.

Initial

Window Treatments

Remove all window treatments, such as blinds, curtains, or drapes before the installation begins. We're not responsible for removing or reinstalling these items.

Initial

Security Systems

If your windows are connected to a security system, kindly deactivate it on the day of installation to prevent accidental triggering. Any alarms set off during the installation process are not the responsibility of Tidal Remodeling.

Initial

Noise Considerations

Window installation involves some noise due to drilling and other activities. Plan accordingly for this disruption, potentially scheduling time away from home during the installation process.

Initial

Safety of Children and Pets

For their safety, it's essential to keep children and pets away from the work area throughout the installation process.

Initial

Wall & Window Decorations

Remove any wall or window decorations near the installation site. Vibrations from the installation process could dislodge these items, potentially leading to damage.

Initial

Material & Sizing

Tidal Remodeling orders windows based on the specifications provided in our contract. Please remember that windows are custom-made items. Any adjustments or changes to the window order after installation may incur additional costs.

Initial

Cleaning

Our team will clean up the work area during and after the installation, but minor dust or debris may remain. We recommend conducting a final cleaning after the installation is complete.
